Method

Price per pound = weighted order-item revenue divided by recipe-derived raw-coffee pounds. The report includes shipped orders, including archived historical orders, and excludes prospecting sample orders, non-positive revenue lines, and lines without recipe-derived coffee pounds from the price calculation. There were 105 positive-revenue lines without coffee-pound recipe weight; those are counted only in the skipped-lines column when they belong to a client in this table.

Skipped = positive-revenue lines for that client that could not be weighted to raw-coffee pounds from product recipes. Those skipped line amounts are not included in revenue, pounds, or \$/lb.
